

MAJESTIC*

12Volt Entertainment

Style Quality Sophistication

UFO X

Gain:
30dB

Noise:
3dB

Range:
VHF 47-230Mhz
UHF 470-862Mhz

Impedance:
75 Ohms

Power Consumption:
50mA

Size:
240mm (9.4")

Reception:
360 Degrees

Amplifier:
Located in Antenna for less Noise

UFO X

The Majestic UFO X is the predecessor to the famous UFO which is over 10 years old in technology. The Majestic UFO X has had serious engineering upgrades which has allowed us to develop the latest in high performance. It has the highest gain of any TV antenna for its tiny 24cm Diameter. It might be small but its packed with powerful technology.

The UFO X has a 30dB High Gain Amplifier built into the Antenna which is a 58% increase in signal performance on the UFO. (For every 3dB Gain the signal level doubles). This gives you a huge advantage over other TV antennas because now you have a very strong signal in the antenna that has not had any interference being induced when it received the signal, and with a very strong being sent down the cable the electrical interference is insignificant compared to the strong signal. Once the signal is sent down to the junction we do not need to do much filtering or cleaning to give you excellent reception.

So if you are looking for a high performing TV antenna then the UFO X will give you the eXtreme performance you are looking for.

When it comes to the best technology, Majestic is leading the way.
