The Choice of the Pros

Mold and Mildew Prevention

A complete system to keep mold and mildew stains off of your boat

The Xanigo Marine Protocol

X

STEP ONE

Remove Mold & Mildew with Xanigo Marine's Mold & Mildew Stain Remover

Our mold & mildew stain remover is a very effective way to remove mold and mildew. Being a harsh chemical it should only be used once to remove the mold, then the preventer should be applied to prevent the mold from coming back.

Liberally apply the Mold & Mildew Stain Remover to your seats. Let it sit for 60-90 seconds but do not let dry. Additional solution may need to be applied— keep it wet.

Agitate in a circular motion with a brush to remove the mold from the pores. Rinse thoroughly with clean water.

STEP TWO

NEUTRALIZE THE REMOVER

After rinsing the remover off with fresh water, it's important to make sure any leftover remover is neutralized so it doesn't dry out your vinyl or impact your stitching.

Spray the Waterless Wash onto your seats and wipe it in with a microfiber cloth to neutralize the chemicals in the remover.

“Works exceptional. Barely have to scrub. Most of the mold comes off without scrubbing. I applied the protector on my boating accessories 3 weeks & no mold. From the humidity in Florida, mold spreads quickly. Thanks to this product it keeps my new vessel new”

- Kurt Kropp - Google Review

STEP THREE

Prevent Mold & Mildew with Xanigo Marine's Mold & Mildew Preventer

With just one application, your boat will be protected against mold and mildew for up to 90 days.

The preventer creates a covalent bond to the surface that it is applied to. You can apply this to almost any marine surface including: vinyl seats, life jackets, canvas, ropes, compartments, live-well, bilge, patio furniture and other areas of high moisture.

Spray the Mold & Mildew Preventer onto a clean, dry surface and spread evenly with a microfiber cloth. Or use one of our professional applicators

STEP FOUR

Maintain with Xanigo Marine's Waterless Wash

Remove sunscreen (a major food source for mold) and leave a refreshing smell without impacting the protective layer created by the mold & mildew preventer. Use in between treatments.
