The COMMODORE 5.5 GPM is our most powerful and versatile water pump. The 5-Chamber design creates a powerful and steady flow of water to tackle the most intense uses. This one pump is designed to fit a variety of applications. It can be used as a fresh water supply pump for up to 5 sinks and showers at the same time, providing flow like house water pressure. It can be used to powerfully blast off the most extreme fish guts and scales as a fresh or raw water washdown pump, providing flow like a home garden hose. Also, it's continuous duty motor makes it a great candidate for livewell and baitwell circulation. Whatever application you choose this 5.5 GPM pump will not disappoint.
